

IBL Texts in Geometry and Analysis
for
Future Teachers

David M. Clark
SUNY, New Paltz

August 3, 2023

— *Tampa MathFest* —

High school mathematics consists primarily of

- 1 Euclidean geometry
- 2 algebra, trigonometry, precalculus, calculus

High school mathematics consists primarily of

- 1 Euclidean geometry
- 2 algebra, trigonometry, precalculus, calculus

Future teachers generally take courses:

- 1 Geometry
- 2 Real Analysis 1 and 2

High school mathematics consists primarily of

- 1 Euclidean geometry
- 2 algebra, trigonometry, precalculus, calculus

Future teachers generally take courses:

- 1 Geometry
- 2 Real Analysis 1 and 2

Goal:

Design inquiry-based courses for future teachers focused on only the topics they will later teach.

2005 - 2012

2005 - 2012

Sophomore/Junior

Euclidean Geometry

- Ch 1. Congruent Figures
- Ch 2. Neutral Geometry
- Ch 3. Area Measure
- Ch 4. Angle Measure
- Ch 5. Similar Figures
- Ch 6. Trigonometry
- Ch 7. Circle Measure
- Ch 8. Perspective Geometry

2005 - 2012

Sophomore/Junior

Xiao Xiao
Utica College

2012 - 2022

Xiao Xiao
Utica College

Xiao Xiao
Utica College

2012 - 2022

Junior/Senior

The Number Line

- Ch 1. Missing Numbers
- Ch 2. Limit Pts & Sequences
- Ch 3. Decimal Representations
- Ch 4. Complete Number Lines
- Ch 5. Continuity
- Ch 6. Calculus
- Ch 7. Log & Exponential Fcns
- Ch 8. The Real Number Line
- Ch 9. The Price of Completeness

2012 - 2022

Junior/Senior

Samrat Pathania
Wallkill High School

2015 - 2023

Samrat Pathania
Wallkill High School

2015 - 2023

Samrat Pathania
Wallkill High School

Senior/Graduate

High School Geometry

- Ch 1. Foundational Principles
- Ch 2. Neutral Geometry
- Ch 3. Similar Figures
- Ch 4. Area Measure
- Ch 5. Angle Measure
- Ch 6. Trigonometry
- Ch 7. Circle Measure
- Ch 8. Consistency & Models

2015 - 2023

Senior/Graduate

Area Measure Axiom. *There is an area measure function \mathcal{A} on all closed regions that has the following properties.*

- (iii) *If X and Y are closed regions that intersect only on their boundaries, then*
- $$\mathcal{A}(X \cup Y) = \mathcal{A}(X) + \mathcal{A}(Y).$$
