4. Reflection and The Future

Mathematics for the Liberal Arts

Fulfills mathematics general education for humanities and social science students.

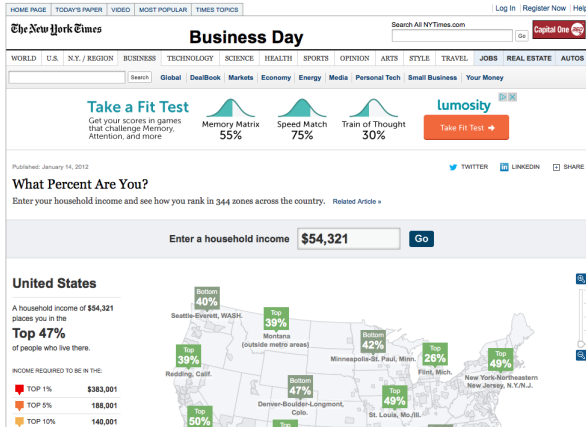

Topics include: methods of problem solving, real number operations and applications, mathematical modeling, basic finance, geometry and symmetry, voting and apportionment, networks and graph theory, and elementary probability and statistics.

Intended focus on improving quantitative literacy.

The Assignment

- ▶ Linked to the unit on percent and putting quantities in perspective.
- ▶ Three Parts: Worksheet, Essay, Oral Presentation
- ▶ 5% of course grade.

Worksheet Section A

Students:

- ▶ Are provided one of two possible household incomes (based on their last name).
- ▶ Use the site to see how the income compares within a couple of regions in Texas.
- ▶ Figure how their income compare to the minimum 1% income in Austin (\$418,281).
- ▶ Compute what percent increase of their income is necessary to become a 1 percenter in Austin.
- ▶ Compute how many salaries equal to their income can a state budget of \$10 billion fund.

Worksheet Section B

Uses linked and related site about occupations and incomes. Students:

- ▶ Look at one type of occupation and solve (simple) problems relating percent.
- ▶ Reflect on why some quantities do not match exactly (due to rounding and significant digits).
- ▶ Research one particular occupation of their choosing and corresponding median or starting salaries, and obtain information about it from the site.
- ▶ Decide in which communities they would rather live given their chosen occupation.

Essay and Oral Presentation

- ▶ “In a short essay (100-150 words) write about the following: Assuming you can secure the salary you found [for your chosen career above], name another area of the USA or the world other than Dallas-Fort Forth or Minneapolis-St. Paul, where you would most like to live and explain why. Cite at least three factors that explain your decision. At least one of the factors must be numerical in nature. Bonus point(s) for citing more factors that are numerical in nature. Type this on a separate sheet and attach to the Project 1 packet that you turn in.”
- ▶ Oral presentation is based on the short essay. (1 minute)

The Assignment Packet

MATH 1312 Project I

What Percent Are You?

Household income has become a hot-button issue in politics and the economy in recent years. The term “one percenter” has been used to refer to those people whose incomes are in the top one percent, and many regard this group of people as having a comfortable life. But since the cost of living varies in different parts of the country, a certain income may or may not afford a comfortable living in every region.

For this project, you will access the following two websites, and examine household incomes and occupational salaries.

- ❖ The first is “What Percent Are You?” On this site, one can enter a household income and find out where does this income lies as compared to others in the country or certain regions of the country. From now on refer to this site as “**Percent Site.**”

http://www.nytimes.com/interactive/2012/01/15/business/one-percent-map.html?_r=0

Familiarize yourself with the interactive features of the Percent Site.

- ❖ The other is “The Top 1 Percent: What Jobs Do They Have?” On this site, one can explore different types of occupations and find out how many people in the country hold such jobs as well as the likelihood that they are in the top 1%. From now on refer to this site as “**Jobs Site.**” Note that the Jobs Site is also linked to the Percent Site.

<http://www.nytimes.com/packages/html/newsgraphics/2012/0115-one-percent-occupations/index.html?ref=business>

Familiarize yourself with the interactive features of the Jobs Site.

The Assignment Packet

Now proceed with the project. There are two parts:

- Part I is the written portion. This consists of doing exercises on the “**Exercise Sheet**” and attaching an essay. The **Exercise Sheet** and instructions for the essay start on Page 3. The essay will be your response to Exercise 9f of the **Exercise Sheet** be will evaluated according to completeness and writing proficiency.
- Part II is the oral presentation portion. The oral presentation portion is based on the essay (response to 9f). Do not read the essay out loud; rather you must give a speech based on the contents of the essay. In the oral presentation you must mention:
 - The occupation you choose in Number 9a as well as the salary you found in 9d.
 - The part of the world where you choose to live.
 - At least three factors that explain your decision to live there (at least one of the factors must have a numerical component).

The presentation must 45 to 60 seconds long. No visual aids are allowed for this presentation. The presentation will be scored on whether you addressed the three items above, whether you stayed within the time allotted, as well as how well you delivered your presentation (engaging? appropriate volume? good flow?).

DUE DATE and WHAT TO TURN IN:

The due date for the written portion and the oral presentation is Thursday, September 25, 2014. On this day, turn it a packet consisting of the following sheets of paper stapled together in this order:

- Grade Sheet (with your name on top).
- Exercise Sheet
- Essay

The Assignment Packet

Name _____

Math 1312 Project I: What Percent Are You?

Grade Sheet

Component	(Remember you will only have points for 3 out of the 4 articles.	Maximum Points	Points obtained
Exercise Sheet (1-9e)	Total out of 40 (see worksheet for point breakdown) not including 9f: _____ x 2 = _____	80	
Essay	Fulfilled all requirements of the essay (bonus possible)	6	
	Right length and overall writing quality	4	
Oral presentation Total (10 points total)	Fulfilled all requirements of for the content of presentation	5	
	Right length (45-60 seconds) and Overall Presentation Quality (Was the presentation engaging? Did the presenter speak with an appropriate voice volume? Did the presentation have a good flow?)	4	
	Did the student evaluate others' presentations?	1	
	Total points from above	100	
Penalties	Packet not stapled, lack of neatness, not right order, missing items such as the grade sheet, etc. (up to 5 points off) Lateness (2 points off per class day late)		

The Assignment Packet

Exercise Sheet for "What Percent Are You?"

Do the following exercises.

Section A: Use the Percent Site for this portion.

- 1) (2 pts) Enter the following incomes depending on the letter with which your family (last) name begins: \$69,500 for A-L, or \$83,500 for M-Z. From now on refer to this income as "*your household income*." Now click on the Austin, Tex. region on the interactive map. (You may need to center Texas on the screen and zoom in.) How does a *your household income* compare to the rest in that same region (something like "Top X%?").

Answer: _____

- 2) (2 pts) Now click on the Wichita Falls, Tex. region (close to the border with Oklahoma). How does *your household income* compare to the rest in that region? Write the answer below.

Answer: _____

- 3) (2 pts) Suppose that the Austin, Tex. region consists of 784,000 households. Using your answer in Number 1 above, how many households in the region have an income at or above *your household income*? Compute the answer below and show all your calculations.

Answer: _____

- 4) (2 pts) Click back on Austin, Tex. and look to the left of the map. It should say some more information about household incomes in the Austin, Tex. region. According to the information on this part, what household income would put you at the top 1% of incomes in Austin? Write the answer below. (Hint: The answer should be bigger than *your household income*.)

Answer: _____

The Assignment Packet

- 5) (4 pts) How does the household income you obtained as the answer in Number 4 above compare to your household income? Answer this question by completing the following sentence:

The household income in Number 4 is about _____ times my *household income*. (Fill in the blank with the closest whole number.)

Show how you obtained the number you wrote on the blank in the space below.

- 6) (4 pts) What percent of *your household income* do you need to add to it in order to reach an income that puts you at the top 1% in the Austin, Tex. region? Hint: You may need to compute a “relative difference.” Compute the answer below and show your work. Round your answer to the nearest whole percent. Show all your calculations.

Answer: _____

- 7) (4 pts) Suppose that a state has devoted \$10 billion for state employee salaries. If the average state employee salary is the amount of *your household income*, how many people can the state employ? Round your answer to the nearest whole number. Show all your calculations.

Answer: _____

The Assignment Packet

Section B: Use the Jobs Site for this portion (except for Number 9d).

8) Find and hover on "Fabricators and Operators." (The easiest way to find this is to enter "Fabricators and Operators" in search field on the upper right of the interactive feature.)

a. (2 pts) According to the information on this site, about how many people have this job?

Answer:

b. (2 pts) What percent of these fabricators and operators are in the top 1%?

Answer:

c. (2 pts) Compute the actual number of fabricators in the top 1% using your answers from 8a and 8b. Show your calculation.

Answer:

d. (2 pts) Explain why your answer in 8c is not necessarily equal to 3,079, which is the number of fabricators and operators that live in households in the top 1%.

The Assignment Packet

9) Now choose a different occupation on the interactive feature. Make sure to be as specific as possible. For example, under "Managers," you must also choose the sector (e.g. Banking).

a. (2 pts) Write your occupation choice here:_____.

b. (2 pts) According to the information provided, about how many people have this occupation?

Answer:_____

c. (2 pts) What percent of the people with this occupation is in the top 1%.

Answer:_____

d. (3 pts) Do some research on other sites and find out an average starting salary for this occupation. Write the salary and cite your source. Then enter this salary on the Percent Site. Where does this salary place you in the United States (e.g. top X%? or bottom Y%)?

Salary:_____

Placement:_____

Source:_____

e. (3 pts) Assuming you are able to secure the same salary you found in 9d, where would you rather live: Dallas-Fort Worth area or Minneapolis-St. Paul (Minnesota)? Cite three factors that justify your decision. At least one of the factors must be numerical in nature. Bonus point(s) for citing more factors that are numerical in nature.

f. In a short essay (100-150 words) write about the following: Assuming you can secure the salary you found in 9d, name another area of the USA or the world other than Dallas-Fort Worth or Minneapolis-St. Paul, where you would most like to live and explain why. Cite at least three factors that explain your decision. At least one of the factors must be numerical in nature. Bonus point(s) for citing more factors that are numerical in nature. Type this on a separate sheet and attach to the Project 1 packet that you turn in.

(Instructor use only: Total Points for Parts 1 to 9e = _____.)

Challenges, Results, Reflection from Fall 2014

- ▶ Scope and length of the assignment. How to focus on quantitative literacy and interpreting numbers in media, and at the same time reinforce the more particular (and more mathematical) skills in the unit?
- ▶ Challenge of combining common, free-response, and open-ended questions. The first type of question is easier/faster to grade.
- ▶ In essay portion, students focused too much on being on the upper percent, rather than thinking about their own interests and lifestyle. (A noticeable number chose to live in Flynt, Michigan.)

Planned Changes for Spring 2015

- ▶ Enhanced essay portion (and consequently a change to the oral presentation).
- ▶ Students are asked to find an ideal region in the US for a fictional character to live based on her situation and wish list (includes salary, housing price restrictions, hobbies and interests).
- ▶ Students must support their choices and claims (e.g. through citing sources).
- ▶ Students are to make numerical comparisons (e.g. “The crime rate in Place X is three times that of Place Y.”)
- ▶ Develop and write out clear statement of the goals of the assignment.
